

Coffee Sales Data Analytics Project Documentation

Project: Coffee Sales Analytics (OJT)

Dataset: 149,116 Rows × 15 Columns, Mavern Analytics

Prepared by: Ankush Kumar Singh

Project Objective

Clean, preprocess and analyze coffee sales transaction data using Microsoft Excel and build an interactive dashboard for business insights.

Data Preparation

- Validated dataset for missing, blank and duplicate values.
- Verified data types and formatting.
- Created Month, Day and Hour features from transaction date and time.
- Prepared a clean dataset for Pivot Tables and dashboard creation.

Dashboard Overview

- Distribution of Transactions by Hour
- Transactions by Product Category
- Distribution of Transactions by Days
- Top 15 Product Categories
- Revenue Distribution by Months
- Month, Day and Hour slicers

Key Insights

- Peak transactions occur during the morning, especially around 8–10 AM.
- Revenue shows a steady increase from January to June.
- Coffee and Tea are the leading product categories.
- A few premium products contribute a large share of revenue.
- Weekday transactions are generally higher than Saturday.
- Interactive slicers enable dynamic analysis.

Skills Demonstrated

Data Cleaning • Feature Engineering • Pivot Tables • Pivot Charts • Dashboard Design • Excel Visualization

Conclusion

The project demonstrates an end-to-end Excel analytics workflow, transforming raw transaction data into an interactive dashboard that supports quick business analysis.
